

Startrex Product Sheet

Startrex

Organic soil improver with a high content of beneficial soil bacteria.

Startrex is a rich humus produced from the leftovers of juiced grapes that are partially converted into humus.

Startrex contains a large quantity of soil bacteria that immediately work to improve the soil and ensure better uptake of organic fertilizers.

Most potting soil is sterilized to kill weed seeds and germs. This also kills all the beneficial soil bacteria and fungi. The result is that it takes a long time for the soil life in your potting soil to become established.

Mixing your potting soil with Startrex brings your soil to life immediately. Startrex promotes the development of mycorrhiza fungi and stimulates the multiplication of beneficial soil bacteria, the growth and the overall health of the plant.

Startrex gives your crop an explosive start, your plants will root faster and growth will take off at a tremendous speed.

Directions for use:

Indoor: Mix your potting soil with 50 grams of Startrex for every 10 liters of potting soil used.

Outdoor: Mix your soil with 250 grams of Startrex for each m² of soil.

Store in a cool and dry place. Keep out of reach of children.

Not suitable for consumption.
